

SKILLED TRADES

# STORM & DISASTER RECOVERY PROJECTS

Staffing Traveling Skilled Trades Crews for Rapid Response

Ship Crew Coverage

Terminal & Dock Support

Passenger Flow Continuity

## THE CHALLENGE

When the storm clears, the clock starts. Critical facilities, plants, infrastructure, and communities need power, structures, and systems restored quickly. But disaster recovery work is rarely simple. Damaged buildings, uncertain utilities, limited access, debris, and tight timelines can all affect how quickly crews can get to work safely.

When skilled trades labor is pulled together at the last minute, contractors may face added risk, slower mobilization, and inconsistent crew performance. Recovery projects require workers who are not only technically qualified, but also prepared for demanding environments, changing site conditions, and urgent project needs.

## THE REAL IMPACT

**Disaster recovery projects depend on crews that are ready before they arrive. Labor gaps during recovery can affect the entire project:**

### Delayed Response

Slow mobilization can extend downtime for critical facilities and operations.

### Safety Risk

Damaged structures, unstable systems, and uncertain utilities require crews with strong safety awareness.

### Project Disruption

Inexperienced or unsupported workers can create delays, rework, or coordination challenges.

### Operational Pressure

Contractors and owners may spend more time scrambling for labor instead of focusing on recovery execution.

## WHY IT MATTERS

Traveling skilled trades teams help contractors respond faster, scale labor where it is needed, and maintain safer, more reliable project execution. The right workforce strategy supports rapid mobilization without sacrificing quality, safety, or accountability.

## THE SOLUTION

**A stronger recovery response starts with a workforce partner that understands urgent project labor needs.**

### Key Focus Areas:

- Deploy travel-ready skilled trades crews
- Prioritize safety in damaged or unstable environments
- Support remote and demanding project conditions
- Maintain consistency through clear expectations and field support

## HOW NSC STAFFING SUPPORTS YOU

**NSC's Skilled Trades division supports recovery projects with workforce solutions designed for speed, safety, and reliability:**

- Travel-ready skilled trades professionals
- Vetted trade experience for demanding project environments
- Safety-focused workers prepared for challenging conditions

NSC helps contractors and owners respond with skilled trades crews built for rapid mobilization, safe execution, and reliable project performance.

Strengthen your recovery workforce strategy with NSC Skilled Trades.
